

Developer Assignment

Using the provided movies.json data set create a responsive web page to match the layout of the attached movies.psd file.

Do's:

- Match colors, fonts, page widths, page paddings as shown in psd.
- A css framework is not required but you may use any framework you are comfortable with.
- Use php to parse the json data set and display 10 results per page.

Don'ts:

- Hard code any of the data from the movies.json data set.

Bonus Points:

- Use ajax to switch between page 1 and 2.
- Use a css compiler like LESS or SCSS to assign colors and font family variables.
- Document your code.
